

SIDE CONSOLE SET-UP

When it comes to freshwater boating versatility, deep-V, multi-species boats are perfect for almost any kind of angler or family. Anglers use these boats for all kinds of species including walleye, bass, panfish, catfish and pike. A recommended set-up for a boat of this type is a Humminbird fish finder installed near the steering wheel console. The size and placement of the unit(s) will depend on the available space on the dash, which can be limiting. A secondary fish finder location, is at the bow, connected to your Minn Kota trolling motor. Since most fishing is done from this location anglers prefer seeing sonar and imaging data taken beneath the front of the boat. And a Talon shallow water anchor will let you stay in place in water up to 15' deep.

Recommended Humminbird Units:

SOLIX 15, 12, 10

HELIX 12, 10, 9, 7
